Outline

1. Introduction to rice planting in China
2. Raising machine for hybrid rice seedlings
3. Weeding machine for organic rice production
3. Rice blast detection using hyperspectral and micro image analysis

2015/11/27 -2-

Annual average temperature is 26 ° C in Guangzhou.

2015/11/27 -9-

1.Introduction to rice planting in China

- RME1: Southern China (two crops a year)
- RME2: Central China (rice-wheat; rice –rape)
- RME3:North-eastern China (one crop a year)

Annual harvested area is about 30 million hectares ;
The production is about 200 million tons each year.

2015/11/27 -10-

1.Introduction to rice planting in China

Two geographical races of rice

Japonica rice

Short
Roundish
Amylose content:0~20%

Indica rice

Long to short
Slender
Amylose content:23~31%

2015/11/27 -11-

1.Introduction to rice planting in China

- RME1: Indica rice
- RME2: 60% Indica
40% Japonica
- RME3:Japonica rice

1.Introduction to rice planting in China

Long ping Yuan
The Father of Hybrid Rice

- 1.Developing the first **hybrid rice** varieties in the 1970s.
- 2.It can produce up to 30% more rice comparing to **inbred rice**.
3. More than 60% rice areas plant hybrid rice.
4. Most indica rices are hybrid rice in China now.

2015/11/27 -13-

2.Raising machine for hybrid rice seedlings

Rice planting can be done in two ways

Direct seeding

Transplanting

2015/11/27 -14-

2.Raising machine for hybrid rice seedlings

- 1.Hybrid rice is more vigorous at seedling stage.
2. The planting density of hybrid rice is lower than inbred rice.
3. The seeding quantity of one tray is much lower.
4. The precision sowing is needed.

2015/11/27 -15-

2.Raising machine for hybrid rice seedlings

Rice raising machine (Iseki, Japan)

2015/11/27 -16-

2.Raising machine for hybrid rice seedlings

1 Feeding trays →2 Paving bed soil → 3 Watering →4 Sowing→5 Covering soil → 6 Brushing soil

2015/11/27 -17-

2.Raising machine for hybrid rice seedlings

Pneumatic vibration sowing device

2015/11/27 -18-

2.Raising machine for hybrid rice seedlings

1. Productivity: 500 trays/h
2. Sowing performance:2~5seeds/bowl, sowing qualified rate is >90%
3. The yield using this machine is 6% more than comparison.

2015/11/27 -19-

2.Weeding machine

Herbicide

2015/11/27 -20-

2.Weeding machine

Marching type weeder

Wide –weeding machine

2015/11/27 -21-

2.Weeding machine

Marching type weeder

2015/11/27 -22-

2.Weeding machine

Wide –weeding machine

2015/11/27 -23-

2.Weeding machine

Wide –weeding machine

2015/11/27 -24-

3.Rice blast detection using hyperspectral and micro image analysis

Leaf blast

Panicle blast

3.Rice blast detection using hyperspectral and micro image analysis

Hyperspectral imaging system

3.Rice blast detection using hyperspectral and micro image analysis

RGB image

Hyperspectral image

3.Rice blast detection using hyperspectral and micro image analysis

Principal Component analysis (PCA)

PC2 image was obtained to identify brown disease spots and gray disease spots

3.Rice blast detection using hyperspectral and micro image analysis

After segmentation, the shape parameters and infected area were used to grade the severity. Classification accuracy was 96%.

Panicle blast

3.Rice blast detection using hyperspectral and micro image analysis

Arrangement structure and morphology of lesion of infected spikelet

3.Rice blast detection using hyperspectral and micro image analysis

Bag of spectra words(BoSW)

3.Rice blast detection using hyperspectral and micro image analysis

Data set	BoSW	AveraFull	AveraPCA	PCAimage	SenPoCorr
First batch	80.05 ± 4.02%	62.20 ± 7.1 0%	69.51 ± 5.1 2%	27.16 ± 4.8 0%	60.37 ± 6.9 1%
Second batch	82.60 ± 4.42%	55.25 ± 4.8 6%	65.19 ± 4.5 7%	18.81 ± 3.3 68%	55.06 ± 5.7 8%
Combination of two batches	80.26 ± 3.56%	60.21 ± 3.6 4%	67.33 ± 3.5 3%	21.71 ± 3.4 2%	59.41 ± 3.7 2%

3.Rice blast detection using hyperspectral and micro image analysis

Micro imaging system

3.Rice blast detection using hyperspectral and micro image analysis

Spores of the rice blast

3.Rice blast detection using hyperspectral and micro image analysis

Edge detection using canny operator

3.Rice blast detection using hyperspectral and micro image analysis

Binary image including only spores

2015/11/27 -37-

3.Rice blast detection using hyperspectral and micro image analysis

Adjacent spores segmentation using DT-GF-WA method
